

Biorisk Threat Intelligence BEFORE You Need It

Empowering Businesses with Actionable Insights

About PHC Global: PHC Global is at the forefront of biorisk intelligence, offering unparalleled insights to safeguard businesses against biological threats. Founded by visionary Dr. Charity Dean, PHC Global synthesizes expertise in public health, data science, and technology to deliver proactive solutions for a safer and more robust business environment.

What is Biorisk? Biorisk refers to the potential for biological factors to negatively impact businesses and people. At PHC Global, we redefine biorisk management by offering not just information, but foresight — anticipating risks before they escalate into crises.

The Importance of Biorisk Intelligence:

In an interconnected world, biological risks pose unprecedented challenges to business continuity and employee safety. Our early, actionable intelligence empowers businesses to mitigate risks, ensuring economic security and fostering a safe working environment.

The intersection of biorisk threats is greater than the sum of their parts. These challenges interact in unpredictable ways, leading to compounding effects that can challenge the ability to respond.

PHC Global's proprietary data sources and actionable recommendations takes the guesswork out of biorisk and helps enterprise teams answer four key questions:

1. What is going on in the world?
2. What is the risk to my assets?
3. How can I protect my assets?
4. What are my peers doing about it?

Pharos Platform: Your Early Warning Radar

Navigating Global Health Risks with Confidence

Pharos, PHC Global's cutting-edge platform, leverages advanced AI and machine learning to distill vast quantities of data into precise, actionable alerts. Developed by leading experts, Pharos is your strategic and tactical partner in navigating the complex landscape of global health risks.

Pharos transforms uncertainty into clarity by predicting and mitigating risks. Pharos allows businesses to:

- Maintain operational efficiency
- Protect their workforce
- Predict absenteeism
- Minimize disruptions and impact

PHC's Pharos includes the Global Threat Tracker, a graphic display of current threat levels and alerts customized just for you. Pharos users can filter multiple data points, including biorisk hazards, locations, risk level, and more to track risks. You're in control with Pharos' user-friendly platform that allows users to easily customize lists and watch all company locations, or just a few.

It's not just about managing risks; it's about staying ahead of them.
